Environmental Operating Solutions Opens New Production Facilities in Denver, Newark, Orlando, and Winston-Salem

EOS now produces its MicroC™ Premium Carbon Sources for nitrogen removal at 9 U.S. locations

BOURNE, MA, March 22, 2010 —Environmental Operating Solutions, Inc. (EOS) announced today that it has opened four new production facilities. The new facilities are located in Denver, Colorado, Newark, New Jersey, Orlando, Florida and Winston-Salem, North Carolina. The new facilities complement existing facilities in Boston, Massachusetts, Portland, Oregon, Greenville, South Carolina and two facilities in Baltimore, Maryland. EOS also announced plans to develop additional facilities in Los Angeles, California and Boise, Idaho in 2010.

All of the new facilities are capable of producing the company's MicroCglycerin™ product, the newest addition to the company's line of MicroC™ Premium Carbon Sources for denitrification and BOD supplementation in municipal and industrial wastewater treatment plants.

MicroC™ Premium Carbon Sources offer the following advantages:

- **Improved Safety:** MicroCg™ and MicroCglycerin™ are completely nonflammable, nontoxic and 100% green products, made from natural, renewable sources of agricultural raw materials.
- **Quality and Consistency:** Manufactured to stringent quality specifications.
- **Environmental Sustainability:** Manufactured from abundant and renewable agricultural raw materials, sourced in the U.S.
- **Price Stability and Cost Effectiveness:** Readily available from domestic resources regardless of market conditions, minimizing the possibility of supply disruptions.
- **Rapid Acclimation Period:** Allows plant operators to optimize their dosing rates during plant start-up, maximizing nitrate removal while minimizing chemical costs.
- **Multiple Applications:** Used across a broad range of biological contaminant removal applications including nitrogen removal and BOD supplementation.

GREEN CHEMICALS FOR
SAFE AND EFFECTIVE
PURIFICATION OF **WATER**

ABOUT EOS (www.eosenvironmental.com)

Environmental Operating Solutions, Inc. provides innovative products for the purification of water. The company's MicroC™ line of denitrification products target contaminant nitrogen at wastewater treatment facilities. There are currently three products under the MicroC™ Premium Carbon Sources umbrella. MicroCg™ and MicroCm™ are carbohydrate-based and MicroCglycerin™ is a crude glycerin-based product. EOS currently provides more than 300 wastewater treatment plants with a safer, more effective, and environmentally sustainable solution compared with methanol and other carbon sources. In addition, EOS offers highly specialized technical expertise and support to help plant engineers and operators optimize the use of its denitrification products. EOS is also engaged in research and development efforts focused on bringing the next generation of specially engineered Premium Carbon Sources to the market. EOS was established in 2003 and is based in Bourne, Massachusetts.
